

Real Life Graphs

23 September 2019 14:14

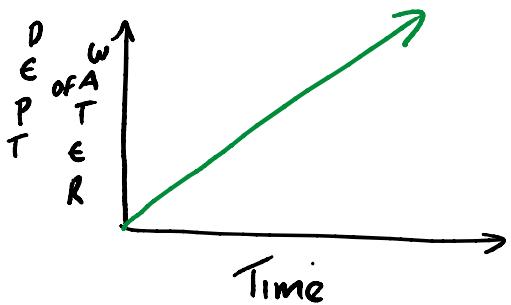

Filling a vessel/container can be graphed
Volume or Height time graphs.

or

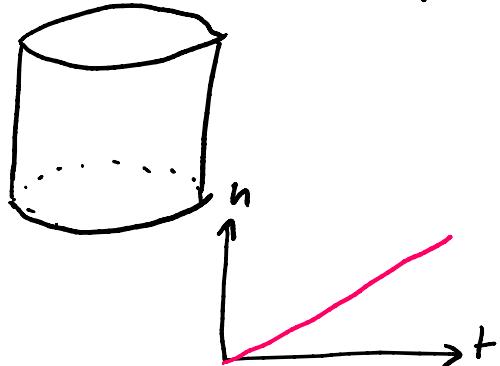

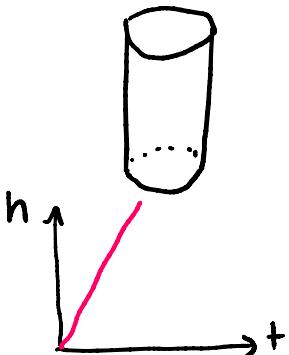

Liquid will flow
into these containers
at a steady rate

The graph is a straight line
because the water
rises at a constant rate.
The width is the same from
top to bottom

The thinner the container the faster it will fill up
Steeper line - Faster

Various Shaped Containers
